

**ROSKA**  
Design | Build | Operate

# WE PUT TOGETHER

AN OILFIELD CONSTRUCTION TEAM  
THAT REALLY KNOWS HOW TO OPERATE

# An “Instant-On” Construction Team with Complete Capabilities

Wouldn't it be nice to work with an oilfield construction provider that had quick-response construction trades and much more? A company that could scale up its workforce, offered engineering assistance and could procure equipment — with its own ready-to-run rental equipment in stock. One that truly understood how well sites and processing facilities are intended to operate.

In choosing Roska, you get all of that and more. We are an oilfield construction team that comes equipped and is backed by complete design, build and operate capabilities. Plus, we are a production and operations company that can provide unlimited commissioning, start-up and operations labour support for all your operating assets.

## Field Construction Services Across the Western Canada Sedimentary Basin, Including in the Far North

Roska is a growing company that operates from locations situated in active oil and natural gas producing areas.

Our complete **in-house capabilities** meet all your field construction-related needs:

- Multiple spreads of ticketed tradespeople led by experienced supervisors
- Trucks and tools
- Ready-to-run, in-stock rental equipment, including Western Canada's most complete lineup of rental pressure piping
- Procurement and fabrication capability
- In-house shop welding capacity
- Efficient vendor management to source, assemble and deliver any piece of equipment
- Complete design and engineering
- A customized quality control program run by dedicated staff, with all supporting documentation
- All technical and industry certifications (ABSA, COR and many more)
- A safety management system with a strong safety commitment across all ranks plus an excellent safety performance record
- Experienced operations personnel to support your commissioning and start-up and to operate the facility

## Fast Response, Depth of Capabilities and Flexibility: Three Reasons to Select Roska

If you need oilfield construction in a hurry, simply call Roska and our skilled, qualified construction trades will show up ready to take direction from your site superintendent.

That's just the beginning. We are a hand-picked team of ticketed tradespeople and professionals led by a senior oilfield construction veteran with over 35 years of experience. We handle all types of mechanical construction at well-sites, plants and facilities. We are experienced in high-pressure, high-rate work and complex plants and processing systems. We're familiar with all hydrocarbon streams, production scenarios and play types. We understand all safe work procedures, material specifications, welding procedures and production facility types.

Our deliverables can range from running temporary flow lines all the way to complete delivery scopes for a 100 mmcf/d gas processing facility. That includes in-house engineering and provision of all equipment from our extensive rental inventory. If we don't have it, we will acquire or build it. We work for a range of customers from locally-based private producers to global super-majors. And we'll deploy anywhere.

We are very good at working under time pressure. Roska delivers oil batteries, field compressors, metering stations, gas processing plants and a variety of management-of-change projects. We are industry experts at early production facilities.

**We have delivered more Duvernay well pads than the rest of the oilfield construction sector — combined!**

## Time Certainty, Value-for-Money and Operations Follow-Through

### Roska's People Are Your Real Value-Add

We are a high-graded team. Every member has been carefully selected. The team is managed by experienced specialists, including project managers, estimators and construction superintendents with decades of experience. We are backed by the full resources of Roska DBO.

## BENEFITS

**We have competitive pricing and we offer more for the dollar. Choosing Roska means you'll manage your construction costs while achieving efficient project execution and timely start-up.**

### Roska Saves You Time

We offer time certainty on all construction work scopes plus significant time savings on integrated projects. Having in-house engineering services, in-stock equipment and deep experience makes us faster than our competitors. We can take weeks off your cycle time from idea to design basis memorandum to procurement to construction and onward to start-up.

### Roska Delivers Superior Outcomes

We have the sophistication to maximize the impact of your dollars spent. When we build something, we visualize a working system in which everything has to function.

Our leaders are problem-solvers who think a project through from start to finish. They have insights to make the equipment run better, safer or more user-friendly. Having our own

engineering team gives us instant access to experts. Their answers give us real-time field information that can avoid costly failures and avoidable changes.

These advantages assist the customer in achieving constructability and operability. Standard oilfield construction companies simply can't do that.

When we work on your project a constructibility review is part of every estimate. That helps you avert costly re-work, scope changes, delays and over-runs.

### Roska Follows Through

Our operations pedigree differentiates Roska from nearly all oilfield construction companies. We have accumulated millions of man-hours in bringing production on-stream and operating oil and natural gas wells and facilities.

During construction, our operations experience aids in configuring the right equipment for your particular project. Following construction, we have on-call labour support for commissioning and start-up. After that, we can provide a staffing solution to operate any well site, oilfield or facility.

## READY-TO-RUN RENTAL EQUIPMENT

All Roska equipment meets our high internal standards and is rated for sour service.

### Selected Well Site and Facility Equipment

↗	Separators, horizontal and vertical, all sizes and pressures
↗	Chameleon 2500 mobile oil production unit
↗	400 bbl tanks
↗	Pressurized liquid storage tanks
↗	Flare stacks
↗	Flare knockouts (FKOD)
↗	Chemical injection skids
↗	Meter skids
↗	Instrument air skids
↗	Power generation
↗	Line heaters
↗	Pressure piping, all classes and sizes
↗	Valves
↗	Blowdown tanks
↗	Truck-out boxes for standard and sour tankage
↗	Engineered temporary pipe racks
↗	Remote terminal units (RTU)
↗	Solar masts

### Selected Construction Equipment

↗	Man-lifts
↗	Skid-steer loaders
↗	Forklifts
↗	Office trailers
↗	Cargo trailers
↗	Light towers
↗	Communications towers

## SAFETY

Roska's field construction team is led by an accredited safety professional and our people are highly trained in safe construction work practices. Safety has the commitment of the company's senior management team.

Roska holds all required safety-related certifications and organization memberships. The company has a corporate safety management system designed specifically for the company's unique lineup of equipment and services. This sophisticated approach exceeds the standards of even the largest, most discerning international energy producers.

We have received multiple customer safety awards.
