Production Peace of Mind

WHEN YOUR TEAM
HAS A COMMON GOAL,
GREAT THINGS CAN HAPPEN.

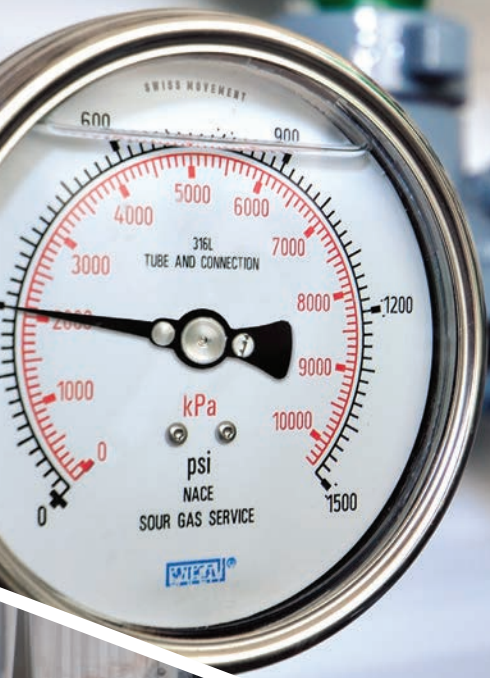

ROSKA'S PEOPLE
ARE ALIGNED
WITH YOU AND
**READY
TO GO.**

WE
TACKLE
YOUR

PRODUCTION CHALLENGES

Things happen in the energy industry — supply chain delays, a service provider doesn't come through, equipment isn't ready or doesn't fit out at the site. Your team is smaller than it used to be. People are under new pressures. A new well comes on much stronger than anticipated (great news, but new challenges as well). New requirements mean retrofitting well sites. Your management of change process is put to the test.

You've lived through all this — and more!

At Roska, we get that. We have built our entire business around helping our customers by providing great people with the right equipment to meet your production and operations challenges.

Anything you need, from a single task at one location to complete field management. A number of field staff, temporary pressure piping or some tanks to keep production flowing. Fully equipped oilfield construction. All the way up to a completely fitted-out early production facility — every piece of equipment, sourced, supplied, custom-engineered and installed by Roska. Plus the entire operations crew to handle the start-up — or operate your facility for years.

Our people and equipment can be found at gas and oil well sites, oil batteries, compressor stations, gas plants, pipeline operations and more. They're familiar with and trained to handle the full range of oil, natural gas and natural gas liquids, including sour gas, as well as high operating pressure.

Roska DBO can be your "Production 911". We will show up on demand, and we will take your production problems to heart. But we also offer the depth of systems and talent to stick around as your production solutions partner for as long as you need us. That is what the words Design - Build - Operate in our name signify.

Horizontal separator.

Pipeline pull-down.

1

WE SAVE YOU MONEY

At Roska DBO, all the disciplines work together. Our unified team brings you real advantages. Like fast turn-arounds. Accurate scoping. Accountability for the design, fabrication and installation. Firm pricing. Plus very attractive rates on capital equipment rentals.

Choose Roska, and you'll see there's great value.

Pressure piping fabrication.

Four-well pad.

3

Roska DBO cuts through the obstacles and delivers solutions. We'll give you firm pricing, bring you time certainty and lower your risks.

When you call us, you'll often hear "Yup" at the other end of the line. Does Roska have the equipment I need? "Yup." Can you guys mobilize to site within 24 hours? "Yup." Do you have qualified people to set it up safely and run it efficiently? "Yup." What about field construction, engineering, drawings and QC? "We can handle all of that."

Meeting your needs is our job, and we take fierce pride in meeting your budget and delivering safely. Throughout the unconventional liquids-rich gas and light oil plays of northwest Alberta and northeast British Columbia and all across the Western Canada Sedimentary Basin. Whether your company is a small private, junior, intermediate or super-major, a midstream or pipeline company, you can count on Roska to hold down your costs and help you transform your capital investments into cash.

Sour pad with pressurized storage.

36" three-phase sour separator.

Our branch locations are situated in the heart of key producing areas and are stocked with widely needed items like pressure piping, separators, tanks and more. Roska's in-stock equipment is designed to be fast to install and is versatile in application. It is available in ready-to-go condition for rent or purchase, accompanied by stamped drawings and QC documents.

We are also able to rapidly engineer, design, source, fabricate, assemble and install a variety of customized equipment and systems for any requirement, including fully engineered, site-ready production packages. Ranging from the right pieces to drive operating efficiencies by optimizing a producing field, right on up to critical systems for the highest volumes, pressures and temperatures encountered in deep, multi-phase unconventional plays.

Roska DBO is a leader at equipping Montney and Duvernay shale wells. Among our advantage: we offer uniquely designed, industry-exclusive systems that enable the producer to bring high-rate unconventional wells on-stream faster than the competition. And we can provide qualified people to operate any system we supply for as long as you need.

HOW? WITH THE RIGHT EQUIPMENT...

Roska DBO is a complete provider of oil and natural gas production and processing equipment. We have the deepest fleet of production equipment in Canada.

Roska DBO supplies rental pressure piping for fast installs!

Selected Equipment Stocked at Roska DBO

- » Pressure Piping
- » Separators
- » Tanks
- » Process Valves
- » Instrumentation
- » VRU Compressors
- » Pumps
- » Heaters
- » Electric Power Solutions
- » Blow-Down Tanks
- » Water Processing and Disposal
- » Smart-Pig Barrels

...AND THROUGH OUR GREAT PEOPLE

Oil and natural gas production and operations are Roska's bloodline. We have been supplying qualified people to producers, midstream operators and pipeline companies for over 20 years, as well as providing personnel for contract operations.

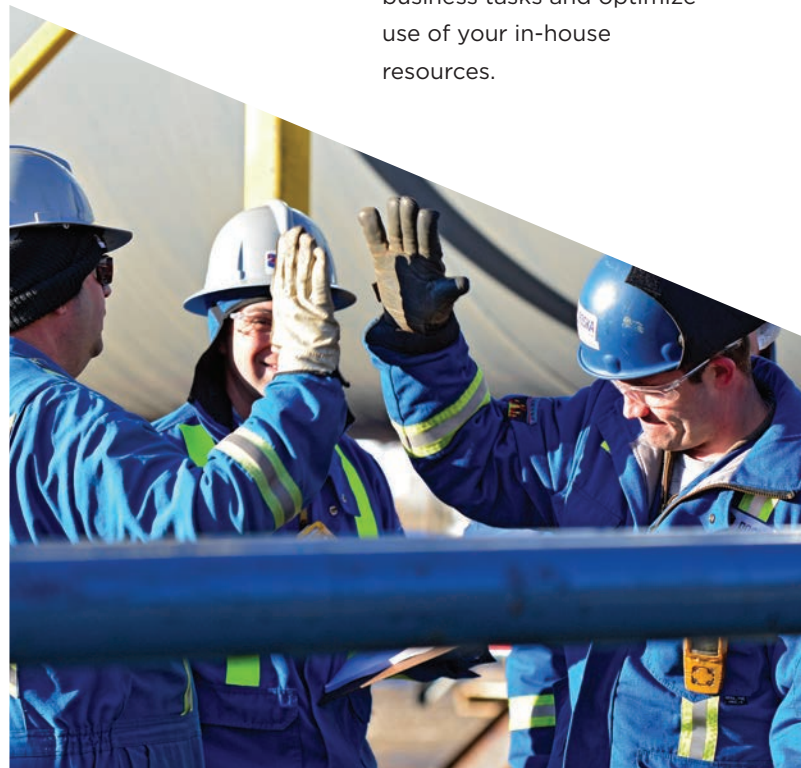

Today we offer a talent pool containing hundreds of the industry's best people — vetted, qualified, trained and certified — within a delivery model that meets the customer's need to match the right people to the challenge at hand and deploy them on time. We're especially experienced at serving the unique industry needs and labour challenges of the North.

Roska's flexibility in staffing can quickly move people in at any stage of an asset's life-cycle — equipped and ready to go. Whether for one-off needs, short-term relief or long-term continuity of service. You might need a single operator to run some outlying wells or work the night shift at a small processing plant. Or a complete team to construct, commission and hand off a well-site or processing facility to your internal operations group. A construction superintendent to oversee a critical installation. Or a long-term contract operations team.

Supporting facility start-ups is a Roska specialty, reflecting that many producing companies don't have the extra staffing resources required to man a facility start-up. We also provide high-end skill sets including engineering, supervision, construction and maintenance. We have people experienced in specialized areas such as heavy oil, power engineering, deep cut processing and more.

Our long-term commitment to specialize in oil and natural gas production and operations has been foundational to our success. We are not an employment agency for numerous industries. Our tight focus has helped make Roska an enduring hub that attracts energy specialists who are qualified, talented, motivated, engaged and reliable. Organized and supported by an experienced team of managers, in-house technical expertise including engineering and service staff.

At Roska, we think of ourselves like a big family — or a small village. It's one of our strengths, helping us sustain high retention and low turnover. When you provide good people with fit-for-purpose equipment, you get great results. To the benefit of you, the customer. Letting you focus your time and attention on core business tasks and optimize use of your in-house resources.

PUTTING IT ALL TOGETHER

You may know us as a provider of rental production equipment serving some of your company's well sites. Or you may have heard of us through a company colleague who rounds out his department's field staff with people from Roska. In fact, we're so much more!

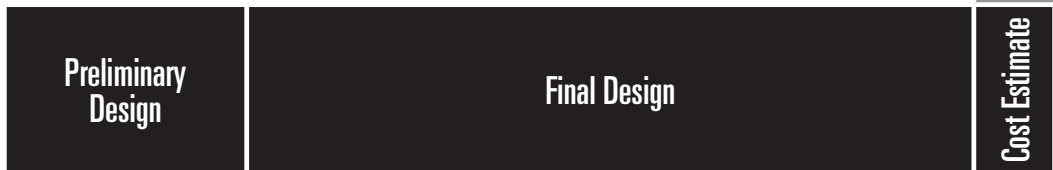

The Roska method can cut your project cycle time by 60 percent, gaining you months of production and advancing your cash flow at a time when every dollar counts.

**Sample Project: Two-well pad, fully equipped, with tanks.
Approximate value: \$2 million.**

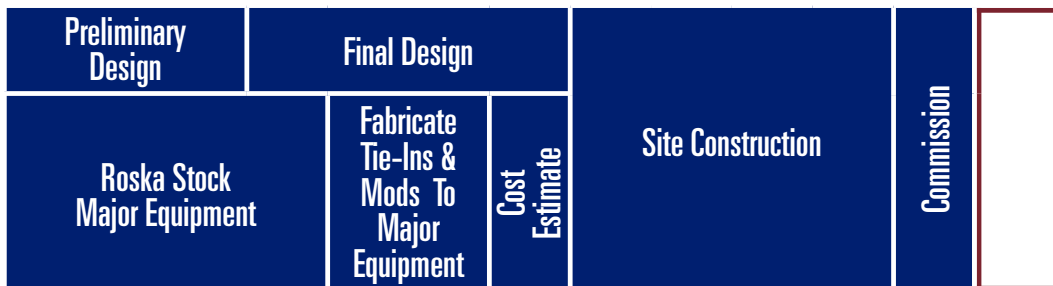

TRADITIONAL METHOD

The traditional delivery model involves separate suppliers for critical steps. This creates sources of conflict, design and fabrication errors, added cost and, above all, wasted time.

ROSKA METHOD

Weeks or months of time can be saved by choosing Roska DBO. Not only are we experienced in delivering design-build solutions — we already have field-ready equipment and components in stock. And we'll supply all the people you need for start-up and operations. Letting Roska partner with you maximizes efficiency.

FULL-CYCLE CAPABILITIES...

...DELIVER INTEGRATED SOLUTIONS.

As the “DBO” in our name implies, we are a full life-cycle provider of everything to do with oil and natural gas production and operations. We’ll always step up with whatever individual scopes you desire. But we’re equally confident that you’ll gain a lot of added value by thinking of us as your production and operations partner.

Roska’s multi-disciplinary team provides integrated solutions — such as the complete delivery scopes of early production facilities in the Duvernay and Montney plays, or 10,000-barrel-per-day oil batteries. We take great pride in putting together well-designed, well-executed sites and supplying our experienced field staff to run them efficiently and safely for as long as you need. We strive for flawless execution, with safety always our number-one priority.

Some of the industry’s largest producers are choosing Roska as their partner because they see the value in gaining:

- » Clear, single-source accountability;
- » Alignment of interests or “everyone pulling in the same direction”;
- » Time certainty;
- » High-quality, well-designed equipment and systems;
- » Stock designs, in order to save time and compress schedules;
- » Qualified people at every stage, including in-house engineering and field operations;
- » Continuous communications; and
- » A simplified supply chain with a single point of contact and “one invoice”.

THE NUTS AND BOLTS:

**CAPABILITIES,
CERTIFICATIONS
AND PROCESSES**

Roska has a complete line-up of locations, equipment and capabilities to deliver our offering and fulfill our customer promise. This includes the thorough safety/compliance/regulatory capabilities required by large, discerning, process-oriented energy companies.

In any given month, Roska-supplied people will be deployed to 3,000 separate well sites and facilities, accounting for an average of 70,000 boe per day.

CAPABILITIES

- » Project management
- » Engineering
- » Equipment procurement
- » Fabrication
- » Oilfield construction
- » Facility commissioning/start-ups
- » Facility operation
- » Facility maintenance
- » Demobilization/decommissioning
- » Electrical and instrumentation

PEOPLE

- » Operators
 - » Plant operators
 - » Field operators
 - » Power engineers
- » Trades:
 - » Pipefitters
 - » Welders — B-pressure and portable field welders
 - » Millwrights
 - » Electricians
 - » Instrumentation technicians
- » Engineers
- » Project managers
- » Construction managers
- » Site superintendents
- » Drivers
- » General labourers
- » And many others

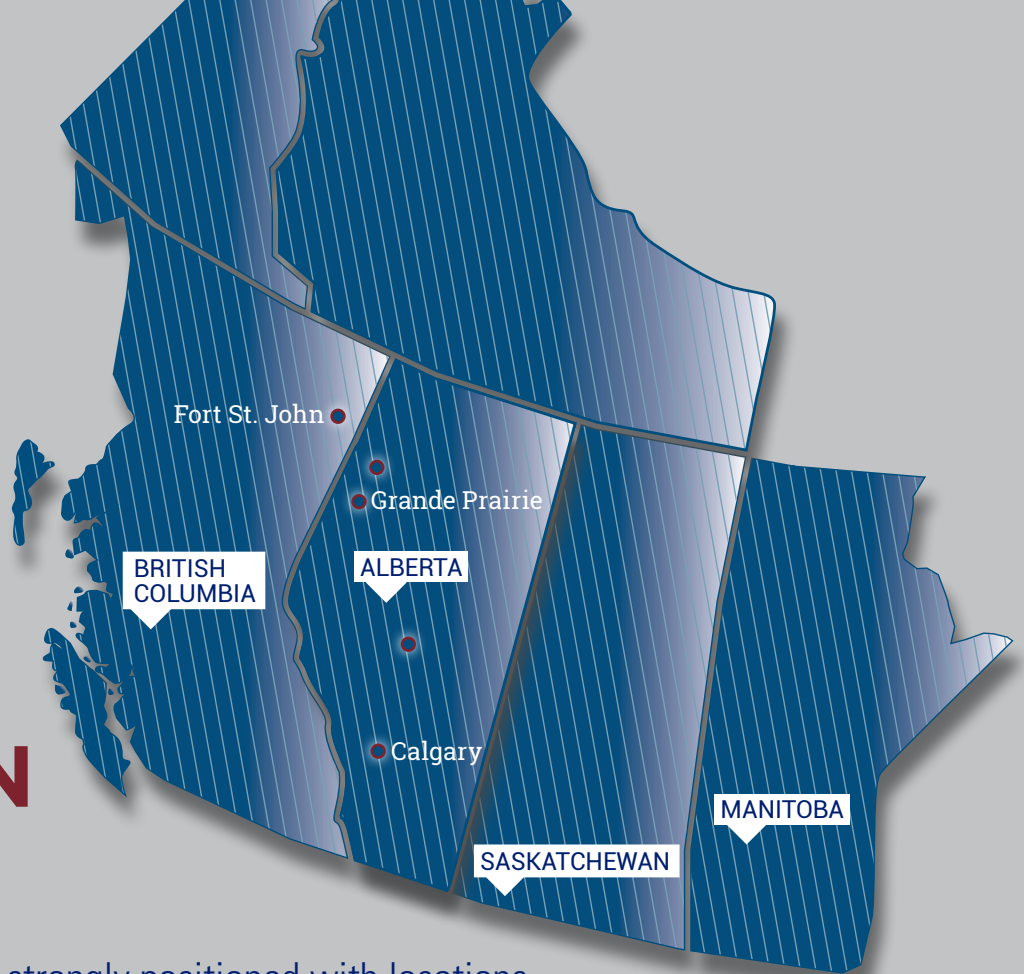

PHYSICAL INFRASTRUCTURE

- » Five locations situated in energy-producing areas
- » One of the industry's most complete pre-fabricated production equipment rental fleets — including pressure piping
- » Well-equipped field vehicles
- » In-house fabrication
- » In-house welding

CERTIFICATIONS AND PROCESSES

- » Alberta Certificate of Recognition (since 2000)
- » British Columbia Certificate of Recognition
- » Internal HSE Management System
- » ISNetwork
- » ABSA Permit holder
- » BCSA Permit holder
- » APEGA Permit to Practice
- » APEGBC Registration
- » API welding procedures
- » Hazardous operations planning
- » Construction work planning
- » In-house competency assessor
- » ComplyWorks

OPERATING ACROSS WESTERN CANADA

We are strongly positioned with locations, resources, equipment and people to serve the oil and natural gas industry throughout the region.

Roska supplies equipment, installs systems and deploys people to sites all over the Western Canada Sedimentary Basin. From northeast British Columbia and the Arctic to Manitoba. From high-rate, high-impact liquids-rich gas and light-oil plays to legacy oil pools and gas fields.
